The reader gets an interdisciplinary insight into the historical development and the current state of ayahuasca research. Findings from three empirical studies are presented, which the author has won in a 4-year field research: How do common standards develop in this particular form of psycho-spiritual tourism? Why are people from developed nations and urban centres heading to the Amazon to ingest the psychedelic beverage Ayahuasca? How do they experience such ceremonies and retreats? Which insights, personal meaning and effects do they gain and how do they integrate their experiences into the everyday life?

Three scientific titans join forces to completely revise the classic text on the ritual uses of psychoactive plants. They provide a fascinating testimony of these "plants of the gods," tracing their uses throughout the world and their significance in shaping culture and history. In the traditions of every culture, plants have been highly valued for their nourishing, healing, and transformative properties. The most powerful of those plants, which are known to transport the human mind into other dimensions of consciousness, have always been regarded as sacred. The authors detail the uses of hallucinogens in sacred shamanic rites while providing lucid explanations of the biochemistry of these plants and the cultural prayers, songs, and dances associated with them.

Research in Analytical Psychology: Applications from Scientific, Historical, and Cross-Cultural Research is a unique collection of chapters from an international selection of contributors, reflecting the contemporary field of research in Analytical Psychology with a focus on qualitative and mixed-methods research. Presented in seven parts, this volume offers unique qualitative research that highlights approaches to understanding the psyche and investigating its components, and offers a Jungian perspective on cultural forces affecting individual psychology. The book brings forward the connections between Analytical Psychology and other disciplines including neuroscience, psychotherapy research, developmental research, Freudian psychoanalysis, and cultural studies. Part I provides an introduction to the volume, establishes the nature of qualitative and interdisciplinary research and its applications for research in other fields, and outlines the presented work. Part II, Approaching Qualitative Research in Analytical Psychology, examines postmodernism and the value a Jungian perspective offers, and introduces Jung's correspondence as an emerging resource. Part III, Research on Symbolic Aspects of the Psyche, looks at archetypal theory and cultural complex theory. Part IV, Research on Consciousness and Emotion, presents chapters on meditation and the spectrums of emotion in mythologies, philosophy, Analytical Psychology, and the neurosciences. Part V, A Complex Systems Approach to the Psyche, addresses research on synchronicity, the geometry of individuation, and complexity, ecology, and symbolism. Part VI, Cross-Cultural Research, contains chapters concerning transcendence, psychosocial transformation, psychological infrastructure, and cultural complexes and cultural identity. Part VII concludes the volume by setting directions for potential areas of future study and collaboration. Each chapter provides an overview of research in a specific area and closes with potential directions for future investigation. The book will enable practitioners and researchers to evaluate the empirical status of their concepts and methods and, where possible, set new directions. It also presents the significance of contemporary Analytical Psychology and offers opportunities for cross-discipline collaboration and fertilization. This book will be essential reading for analytical psychologists in practice and in training, academics and students of Analytical Psychology and post-Jungian ideas, and academics and students of other disciplines seeking to integrate methods from Analytical Psychology into their research. It is complemented by its companion volume, Research in Analytical Psychology: Empirical Research.

This book, first published in 1969, examines the 'philosophies of existence' or Existentialism and the field's leading philosophers. These philosophers, the book argues, wished to distinguish themselves from other philosophies in their structure and approach – and it is that structure that this book takes care to analyse.

Heidegger's Eschatology tells the story of Martin Heidegger's beginnings as a theologian, and of his increasing criticism of Christianity and attempt to formulate an eschatology (that is, an account of the essential future-directedness of human life) without a Christian horizon. The book draws on a wealth of newly available primary sources in German, and offers the most thorough and interesting account of Heidegger's passionate and original engagement with theology on the market. In particular, it tells the story, for the first time, of Heidegger's relationship to Dialectical Theology—a relationship about which little has been known, but which is defining for the relation between 20th-century continental philosophy and theology more generally.

Presumably people who were involved in it discuss the philosophy behind the exhibition Shamans--The Secret World of Siberia's Peoples, on display at the Vapriiki Museum Centre in Tampere, Finland, between May 1998 and January 1999. It was the most extensive display so far of the shamanic collections of Kunstamera, Museum of Anthropology and Ethnography, founded in the 1720s by Peter the Great. In addition to exploring aspects of Siberian shamanhood, the 19 essays also show links to similar traditions elsewhere in the world. There are a few monochrome illustrations. No index is provided.
