This volume presents an exploration of the role of embodied cognition in creating personal, imaginative renditions of hair, that also distally relate to the symbolic significance of the fairytale character Rapunzel's hair (in terms of physical life, romantic life, spiritual life, and psychic life, respectively). Integral to this relation, is the author's idea of "fancifold", which is a quality or state of the imagination that can produce unique neuropsychological elements of enchantment and disenchantment entwined. This book will be of

Phelps led his parishioners in protest, displaying signs with slogans like "Matt Shepard rots in Hell," "Fags Die God Laughs," and "God Hates Fags." In counter-protest, activists launched an "angel action," dressing in angel costumes, with seven-foot high wings, and creating a visible barrier so one would not have to see the hateful signs. Though long thought of as one of the most virulently anti-gay genres of contemporary American politics and culture, in *God Hates Fags*, Michael Cobb maintains that religious discourses have curiously figured as the most potent and pervasive

forms of queer expression and activism throughout the twentieth century. Cobb focuses on how queers have assumed religious rhetoric strategically to respond to the violence done against them, alternating close readings of writings by James Baldwin, Tennessee Williams, Jean Toomer, Dorothy Allison, and Stephen Crane with critical legal and political analyses of Supreme Court Cases and anti-gay legislation. He also pays deep attention to the political strategies, public declarations, websites, interviews, and other media made by key religious right organizations that have

The camera supposedly never lies, yet film's ability to frame, cut and reconstruct all that passed before its lens made cinema the pre-eminent medium of visual illusion and revelation from the early twentieth century onwards. This volume examines film's creative history of special effects and trickery, encompassing everything from George Méliès' first trick films to the modern CGI era. Evaluating movements towards

the use of computer-generated 'synthespians' in films such as Final Fantasy: the Spirits Within (2001), this title suggests that cinematic effects should be understood not as attempts to perfectly mimic real life, but as constructions of substitute realities, situating them in the cultural lineage of the stage performers and illusionists and of the nineteenth century. With analyses of films such as Destination Moon (1950), Spider-Man (2002) and the King Kong films (1933 and 2006), this new volume provides an insight into cinema's capacity to perform

Long before humans wrote, we painted. From mud and ash to acrylic and computers, artists across the centuries have found countless inventive ways to explore and express some of life's biggest mysteries. Enter space art, a genre of artistic expression that strives to capture the wonders of our universe. This lavishly illustrated book chronicles the remarkable development of space art from a fledgling theme to a modern movement. In Part I, we traverse the history of art and astronomy from ancient times, through
