The interconnection of various active and passive components in a prescribed manner to form a closed path is called an electric circuit. The system in which electric current can flow from the source to the load and then back to the other terminal of the source is referred to as an electric circuit. The main parts of an ideal electric circuit are: Electrical sources for delivering electricity to the circuit and these are mainly electric generators and batteries

A Circuit which contains on many electrical elements such as resistors, capacitors, inductors, current sources and Voltage source (both AC and DC) is called Complex network. These kinds of networks can 't be solved easily by simple ohm 's Law or Kirchhoff 's laws. I.e. we solve these circuits by specific technique i.e. Norton 's Theorem, Thevenin 's Theorem, Superposition theorem etc.

Electric circuit theorems are always beneficial to help find voltage and currents in multi-loop circuits. These theorems use fundamental rules or formulas and basic equations of mathematics to analyze basic components of electrical or electronics parameters such as voltages, currents, resistance, and so on. These fundamental theorems include the basic theorems like Superposition theorem, Tellegen 's theorem, Norton 's theorem, Maximum power transfer theorem, and Thevenin 's theorems.

1. A loop in the network is any closed path through two or more elements of the network. Any non-trivial network will have at least one such loop. $i_2 + v_2 - + - + - i_1 v_1 v_3 i_3$ Figure 2: This is a loop 2. a node is a point at which two or more elements are interconnected. $i_1 + v_1 - - v_2 + i_2 + - v_3 i_3$ Figure 3: This is a node

A network, in the context of electrical engineering and electronics, is a collection of interconnected components. Network analysis is the process of finding the voltages across, and the currents through, all network components. There are many techniques for calculating these values. However, for the most part, the techniques assume linear components. Except where stated, the methods described in this article are applicable only to linear network analysis.
