This edition of
ICD-O, the
standard tool
for coding
diagnoses of
neoplasms in
tumour and
cancer
registrars and
in pathology
laboratories,

Where To Download

Johnson Dx
9100 Manual

has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The

Where To Download

book has five
main sections.

The first
provides general
instructions for
using the coding
systems and
gives rules for
their
implementation
in tumour
registries and
pathology
laboratories.

Where To Download

Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section,

Where To Download

which introduces
several new
terms and
includes
considerable
revisions of the
non-Hodgkin
lymphoma and
leukaemia
sections, based
on the WHO
Classification
of Hematopoietic
and Lymphoid

Diseases. The
five-digit
morphology codes
allow
identification
of a tumour or
cell type by
histology,
behaviour, and
grade. Revisions
in the
morphology
section were
made in

consultation

with a large
number of

experts and were
finalised after
field-testing in
cancer

registries
around the

world. The
alphabetical

index gives

codes for both
topography and

morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes

lists of all new
code numbers,
new terms and
synonyms added
to existing code
definitions,
terms that
changed
morphology code,
terms for
conditions now
considered
malignant,
deleted terms,

and terms that
