* Outboard motor repair for the average guy * Fix up an old outboard and SAVE \$1000 or more compared to buying a new motor! With a little know-how and a few common tools, you can fix an old motor—bring it back from the dead. Sometimes all it takes is a squirt of WD-40 into the cylinder and a new spark plug. Or a new set of points and condensers—which do not require expert knowledge or black magic to install. Maybe the carburetor needs cleaning and adjusting. You can do it! Max E. Wawrzyniak III is an outboard motor guru. He advises you to find an old motor at a yard sale for \$100 or so (and he tells you exactly which ones to look for), and fix it up—rather than spending \$1500 or more on a new motor. He is a big fan of “cheap power.” Get on the water with money left in your pocket. With a basic understanding of how these motors work, a little logical thinking, and a few hours’ work, you can go boating for a fraction of what everyone else has to pay. Also—for the boater who already owns an outboard motor of any age—this book demystifies these internal-combustion marvels that can bring such frustration if they malfunction. You’ ll learn how they work, and the simple things you can do to keep them running forever. What Max teaches are not only money-saving skills, but can also be life-saving, as you will no longer be helpless in the face of engine trouble on the water. His clear instructions and over one hundred color photographs will make anyone into a capable outboard mechanic. INCLUDES: What to Buy, Where to Find It, Tools Needed and Where to Begin, The Ignition System, Carburetors, Water Pump Repairs, Recoil Starters, Fuel Tanks, Propellers, Lower Units, Emergency Shut-Down, Fuel Pump Conversion, Remote Controls: Shift and Throttle, Remote Control: Steering, Tiller Conversion, Trouble-Shooting, and Onboard Spares and Tools. This book has always been very popular and well-used in its print edition. Now it's available as an e-book so you can load it into your phone or tablet and always have this wealth of repair / maintenance information at your fingertips, even when out on your boat.

SELOC Marine maintenance and repair manuals offer the most comprehensive, authoritative information available for outboard, inboard, stern-drive and diesel engines, as well as personal watercraft. SELOC has been the leading source of how-to information for the marine industry since 1974. Designed and written to serve the needs of the professional mechanic, do-it-yourself boat enthusiast, instructor and student, these manuals are based on actual teardowns done by Chilton Marine’s editors/authors in our on-site facility. Providing complete coverage on everything from basic maintenance to engine overhaul, every manual features: -Simple-to-follow, step-by-step, illustrated procedures -Hundreds of exploded drawings, photographs and tables -Troubleshooting sections, accurate specifications and wiring diagrams -Recognized and used by technical trade schools as well as the U.S. military Covers all 80-300 Hp, V4, V6 and V8, 2-stroke models.

The aim of this book, with its superb step by step photographs and detailed diagrams is to enable every owner to understand the workings of an outboard motor (2 or 4 stroke) and be able to fix it with relative ease. It includes: an explanation of the different parts that make up the engine and how they interact; how fuel is transformed into propulsion; regular maintenance and repair worksheets to help even the most mechanically ignorant to work on their outboard engine with confidence; the most common causes of breakdown; troubleshooting tables to allow you to diagnose and fix the most common engine problems and advice on how to winterize your outboard in one short afternoon. After reading this book, your outboard will no longer be a potential bother to you but an ally for better boating.

"Incredible amount of detail about all those kickers from the past, including an appendix with comprehensive model-year information." WoodenBoat "This book is the one to buy if you are interested in collecting antique outboard motors." Boating

This is a new edition of the classic textbook on marine protected area (MPA) management in the tropics, originally produced as an output of the Bali World Parks Congress in 1982. Approaches to planning and managing MPAs have evolved considerably. Major advances include innovative financing mechanisms, partnerships with the private sector and NGOs, and collaborative management between government and coastal communities. These advances have brought new approaches for MPA establishment and management that are more participatory, involving communities through interaction and collaboration rather than prescription. With new case studies and illustrations, the guide comes in a water-resistant cover for field use. It is intended for those who plan individual and/or national MPA systems and gives philosophical context for MPAs along with some basic principles and approaches.
