8 Problems and Solutions in Atomic, Nuclear and Particle Physics Solution: (a) The table shows that the ionization energy of He is much larger than that of H. The main reason is that the nuclear charge of He is twice that of H while all their electrons are in the first shell, which means that the potential energy of the electrons are much lower in the case of He. The very

Kinematic equations relate the variables of motion to one another. Each equation contains four variables. The variables include acceleration (a), time (t), displacement (d), final velocity (vf), and initial velocity (vi). If values of three variables are known, then the others can be calculated using the equations. This page demonstrates the process with 20 sample problems and accompanying ...
