knowledge. A foundation is the
part of a building below ground
level that transfers loads from the
construction above it to load-
bearing ground or rock strata
below it. Installing foundations
normally requires excavating the
ground to the required depth.

The main role of foundations is to structurally support the building by transferring the loads of the building through the walls into the surrounding soil. In terms of a stick frame structure, the foundations must also protect the timber from moisture ingress by lifting the members above the ground. The
