This study examines the effect of experience and uses stimulated recall to attempt to understand the interactional patterns of two groups of NSs (with greater and lesser experience) interacting with second language (L2) learners outside of the classroom context.

The methodology of introspection, and especially of stimulated recall, is gaining increasing popularity in second language research. This book provides a "how-to" guide for researchers considering using this technique, contextualized within a history of the procedure and a discussion of its strengths and weaknesses. Topics covered in depth include: * research questions for which this methodology is (and is not) well-suited, * preparing for data collection, * transcribing, coding, and analyzing stimulated recall data, and * avoiding common pitfalls in the use of this methodology. By way of demonstration, the authors walk readers, step by step, through several studies in different areas of second language education which have used this technique, including L2 writing, reading, oral interaction, and interlanguage pragmatics. This book is one of several in LEA's Second Language Acquisition Research Series dealing with specific data collection methods or instruments. Each of these monographs addresses the kinds of research questions for which the method/instrument is best suited, its underlying assumptions, a characterization of the method/instrument and extended description of its use, and problems associated with its use. In this second edition of the best-selling Second Language Research, Alison Mackey and Sue Gass continue to guide students step-by-step through conducting the second language research process with a

clear and comprehensive overview of the core issues in second language research. Supported by a wealth of data examples from actual studies, the book examines questions of what is meant by research and what defines good research questions, covering such topics as basic research principles and data collection methods, designing a quantitative research study, and concluding and reporting research findings. The second edition includes a new chapter on mixed-methods, new "time to think" and "time to do" text boxes throughout, and updates to reflect the latest research and literature. Supplementary materials, including an extensive glossary and appendices of forms and documents that students can use in conducting their own studies, serve as useful reference tools, with suggestions on how to get research published reemphasizing the book's practical how-to approach. Second Language Research, Second Edition is the ideal resource for understanding the second language research process for graduate students in Second Language Acquisition and Applied Linguistics.

This international handbook offers an in-depth study of the development of primary Technology (or

Design and Technology) education worldwide. It is unique in that it focuses on the way in which the building blocks for this subject have been established providing much needed research and information for those involved with secondary education and beyond to draw on. The inclusion of Technology education into primary curricula has gathered momentum for the last two decades as its importance and relevance to children's lives has been realised by educators. This handbook offers a detailed insight into the many and varied ways in which countries have incorporated the subject into children's primary school experiences, and issues that have arisen during its implementation. The authors all work in the field of primary technology education and have been actively involved in curriculum development and research in their own countries. The first part of the book is devoted to the introduction, the development and implementation of Technology education into the primary curricula of countries worldwide. Reasons for this movement, successes and barriers to development are discussed and speculation about the future of Technology education is reflected upon. The second part of the book relates to issues that have arisen as the subject has grown over the last twenty years, and consideration needs to be given to these if future successes are to be achieved. Classroom practice including designing and ICT, teacher education, enterprise, sustainability and indigenous technology are all reflected upon and support the notion of technology as a valued and valuable part of the primary curriculum This book should be of interest to undergraduate and graduate students, practitioners, researchers, curriculum developers, policy makers and professional development providers who are involved with, and have an interest in, primary technology education worldwide.

Understanding, Evaluating, and Conducting Second Language Writing Research speaks to the rapidly growing area of second language writing by providing a uniquely balanced approach to L2 writing

research. While other books favor either a qualitative or quantitative approach to second language acquisition (SLA) research, this text is comprehensive in scope and does not privilege one approach over the other, illuminating the strengths of each and the ways in which they might complement each other. It also provides equal weight to the cognitive and socio-cultural approaches to SLA. Containing an array of focal studies and suggestions for further reading, this text is the ideal resource for students beginning to conduct L2 writing research as well as for more experienced researchers who wish to expand their approach to conducting research.

The Think-Aloud Controversy in Second Language Research aims to answer key questions about the validity and uses of think-alouds, verbal reports completed by research participants while they perform a task. It offers an overview of how think-alouds have been used in language research and presents a quantitative meta-analysis of findings from studies involving verbal tasks and think-alouds. The book begins by presenting the theoretical background and empirical research that has examined the reactivity of think-alouds, then offers guidance regarding the practical issues of data collection and analysis, and concludes with implications for the use of think-alouds in language research. With its focus on a much-discussed and somewhat controversial data elicitation method in language research, this timely work is relevant to students and researchers from all theoretical perspectives who collect first or second language data. It serves as a valuable guide for any language researcher who is considering using think-alouds.

This addition to the Cognitive Science and Second Language Acquisition series presents a comprehensive review of the latest research findings on sentence processing in second language acquisition. The book begins with a broad overview of the core issues of second language sentence

processing research and then narrows its focus by dedicating individual chapters to each of these key areas. While a number of publications have discussed research findings on knowledge of formal syntactic principles as part of theories of second language acquisition, there are fewer resources dedicated to the role of second language sentence processing in this context. This volume will act as the first full-length literature review of the field on the market.

Games are increasingly becoming the focus for research due to their cultural and economic impact on modern society. However, there are many different types of approaches and methods than can be applied to understanding games or those that play games. This book provides an introduction to various game research methods that are useful to students in all levels of higher education covering both quantitative, qualitative and mixed methods. In addition, approaches using game development for research is described. Each method is described in its own chapter by a researcher with practical experience of applying the method to topic of games. Through this, the book provides an overview of research methods that enable us to better our understanding on games.
