"Index medicus" in v. 1-30, 1895-1924.

Endocrine emergencies are often potentially life-threatening and can be easily overlooked in patients with no history of endocrine disease. *Endocrine Emergencies* is a practical guide to identification and treatment for today's clinicians, offering essential coverage of common and serious emergencies related to endocrine metabolic conditions of the thyroid, parathyroid, pituitary, and adrenal glands. Guides clinicians on how to recognize, diagnose, and treat each condition using up-to-date diagnostic techniques and therapeutics. Provides full-color, state-of-the-art coverage of key topics such as acute thyrotoxicosis and thyroid storm, ocular emergencies in Graves' ophthalmopathy, diabetic ketoacidosis, hypopituitarism, postoperative thyroid surgical emergencies, pheochromocytoma, and much more. Features separate chapters on emergencies related to neuroendocrine tumors, pregnant patients, and pediatric patients.

Includes sections on emergency overview, symptoms, diagnosis, and treatment in each chapter.

The “Groupe International de Recherche sur l’Infinitésimal” (GIRI) was created in 1986 by Professor Madeleine Bastide and Doctor René Halm. Madeleine Bastide was its President for several years. The group comprises actually more than 100 researchers from different disciplines (physicians, chemists, biologists, pharmacologists, physicists, etc.) from 22 different countries. The original aim, which, for the most part, has now been achieved, was to create a working group to exchange ideas and results concerning the effects of very low doses and high dilutions. Madeleine Bastide then proposed to publish a collection of the lectures given at their scientific meetings in a bilingual book (French and English) entitled “Signals and Images”. The first volume was published in 1990 by the ATELIERS ALPHA BLEUE. It contains lectures on the new pharmacological approach and related concepts that were presented at the 3rd and 4th Symposiums held in Paris in 1989 and 1990. This volume treats the problem of the effects of very low doses and high dilution in in vitro and in vivo experimental models. It is conceivable that this effect, like that of elect- magnetic fields, is none other than an “ultra molecular” effect as shown in yet p- lished results. The effect could be interpreted as a piece of information, i. e. a signal whose transmission and perception remains to be elucidated. According to Madeleine Bastide “everything depends on the nature and quality of the information, signals and images”.
